Pneumatic Routing Machine MU 3-P / MU 3-PD

Function

- Position the fence plates and router depth.
- Position the workpiece.
- The workpiece is clamped when the foot pedal is pressed and the motor starts
- Continued pressure on the foot pedal raises the routing unit to the predetermined depth.
- The router unit then returns to its home position and releases the workpiece and the motor switches off
- With the MU 3P-D, both the routing position and the routing depth are displayed digitally. Accuracy 1/10mm.
